

Circadian Analysis

Circadian Analysis Module for LabChart® Software & PowerLab®

Features & Benefits

- Analyze continuous or intermittent data with a daily pattern
- Generate graphical and tabular views of circadian data
- Automatically average your circadian data
- Customize circadian period start time and length
- Exclusion filter for outlying data
- Applications: Hormonal studies, sleep studies, telemetry, long term studies.

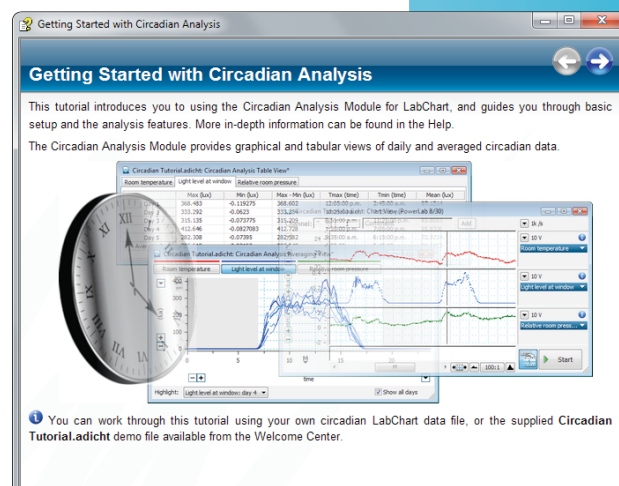

LabChart showing Chart View (top left), Averaging View (top right) and Table View (bottom).

The Circadian Analysis Module for LabChart (Windows) analyzes data with a daily pattern, and generates graphical and tabular views of the daily and averaged circadian data. It can be used for hormonal studies, sleep studies, telemetry research and long-term studies of physiological variables.

With the Circadian Analysis module, you can analyze day-by-day data over multiple channels as continuous, intermittent or calculated data. The module can automatically average circadian data and makes it easy to customize circadian period start time and length. There is an optional data exclusion filter to ignore data that falls out of range.

The LabChart Welcome Centre features a Getting Started Tutorial that guides you through the Circadian Analysis Module features using either your own data file or a supplied sample data file.

Circadian Analysis Module

Detection & Analysis Settings

The Circadian Analysis Settings dialog allows you to select channels to be included for analysis. You can adjust the time settings including day length, start time and averaging interval, as well as enable and configure the data exclusion filter and light on/off shading feature in the Averaging View.

Averaging View

Averaging View plots average interval data for single or multiple channels and you can view channels in whole or separately. All day plots are displayed as an overlay on top of the average day. You can select specific days and values for any particular point in time by selecting it from the highlight drop-down list, hovering or clicking on the trace.

Table View

Table View automatically displays calculated parameters for each single day, as well as determining an average day. The Table View logs all calculated pressure parameters in real time, and you can tab through the Table View for different channels. Table rows are linked to various LabChart windows; highlighting a row will automatically show the corresponding beat in the Analysis View and LabChart View data.

Exporting Data

You can export the Averaging View plot and Table View as text or image formats.

LabChart Pro

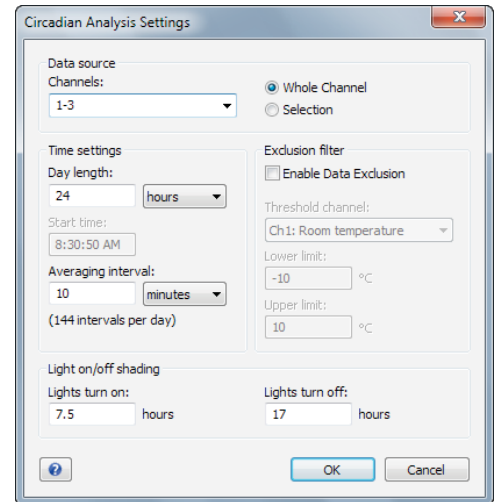

LabChart Pro provides researchers with more acquisition and analysis power at a great price. It comprises LabChart software, LabChart Modules (including the Circadian Analysis Module) and 5 years of free upgrades. You can obtain any new LabChart Modules released during the 5 year period at no extra cost. All software is conveniently available for download. An evaluation version is available.

Ordering Information

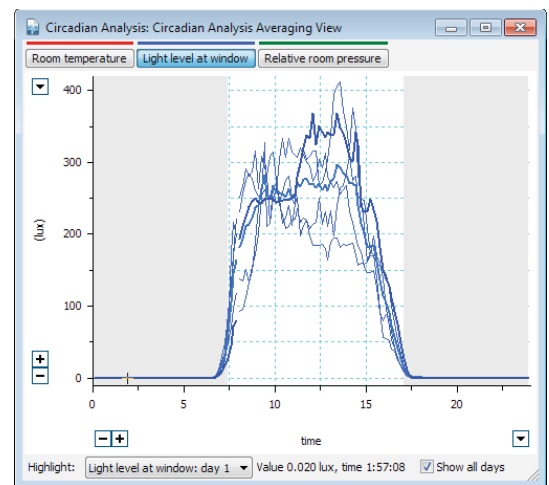

Circadian Analysis Module	LabChart Pro* (sold separately)
MLS395/7 Circadian Analysis (Win)	MLS260/7 LabChart Pro (Win & Mac)

* LabChart Pro includes LabChart software and all LabChart Modules, providing powerful data acquisition and analysis capabilities.

 Share your data with colleagues. Free LabChart Reader – download to view and analyze LabChart data.
